Professional Summary

Recent Bachelor of Computer Applications (BCA) graduate with hands-on experience building AI-powered and full-stack web applications using Python, Java, Django, and REST APIs. Skilled in Object-Oriented Programming (OOP), Data Structures Algorithms, SQL, and AI technologies including LangChain, Google Gemini API, Retrieval-Augmented Generation (RAG), and ChromaDB. Internship experience in Java development and cloud computing with a strong foundation in software engineering, debugging, SDLC, and Agile development.

Technical Skills

Programming Languages: Python, Java , Javascript

AI/LLM: LangChain, Google Gemini API, Retrieval-Augmented Generation (RAG), ChromaDB, Prompt Engineering

Frontend: HTML5, CSS3, JavaScript

Backend APIs: Django, Django REST Framework, REST API Design Development, JWT Authentication

Cloud Databases: AWS (Cloud Deployment Workflows), MySQL

CS Fundamentals: Data Structures Algorithms, OOP, Design Patterns (MVC, Singleton, Factory), Multithreading Concepts

Tools Practices: Git, GitHub, Postman, Debugging Performance Optimisation, AI API Integration ,Linux Commands.

Projects

MentorVix — AI Career Guidance System Document-Based

Python — Django — Django REST Framework — LangChain — Google Gemini API — ChromaDB — JWT — HTML — CSS — JavaScript — SQLite — Render

GitHub

- Developed and deployed an AI-powered career guidance platform using Python, Django, Django REST Framework, and REST APIs.
- Implemented Retrieval-Augmented Generation (RAG) using LangChain and ChromaDB to enable semantic document search and context-aware question answering.
- Integrated Google Gemini API to generate AI-powered career recommendations and document-based responses.
- Designed secure backend services with JWT authentication, user management, profile management, and role-based access control.
- Built document upload, PDF parsing, embedding generation, vector storage, and retrieval workflows for AI-assisted document analysis.
- Deployed the application on Render using WhiteNoise with Git-based version control.

Expense Tracker — Full-Stack Web Application

Python — Django — MySQL — HTML/CSS/JavaScript

GitHub

- Developed a full-stack expense management web application using Python, Django, MySQL, HTML, CSS, and JavaScript.
- Designed RESTful backend modules supporting secure authentication and CRUD operations.
- Created normalized MySQL database schemas for efficient expense tracking and reporting.
- Used Git for version control and followed SDLC practices throughout development.

Internship Experience

Java Developer Intern – InternPe

Jun 2025 – Jul 2025

- Developed Java applications using Core Java and Object-Oriented Programming (OOP) principles.
- Implemented reusable components by applying design patterns including Singleton and Factory.
- Participated in debugging, code reviews, and software testing to improve application quality and maintainability.
- Collaborated with mentors in an Agile-style development environment while following software development best practices.

Cloud Computing Intern – 8Queens

Jun 2024 – Aug 2024

- Gained hands-on exposure to cloud computing concepts, deployment workflows, and scalable application architecture.
- Assisted in cloud environment configuration, application deployment, and technical documentation.
- Learned cloud service fundamentals, deployment best practices, and infrastructure management concepts.
- Worked with version control and documentation practices while understanding cloud-based software development workflows.

Education

Bachelor of Computer Applications (BCA)

2023 – 2026

Dr. MGR Janaki College of Arts and Science for Women Specialisation: Computer Applications

CERTIFICATIONS

- Full Stack Development using AI Tools – Edunet Foundation
